

**AvGrav**

FOR LINE SERVICE • FUELERS • FUEL QC

API gravity at 60°F, in seconds.

Type the hydrometer reading and the temperature.
AvGrav corrects it, checks it against the delivery ticket,
and keeps the record. iPhone and Apple Watch.

**60°F****Correct to 60°F**

The published API MPMS 11.1 correction, with the glass hydrometer adjustment. Density meters correct to 15°C.

TKT**Check the delivery**

Enter the ticket value and see the difference against the tolerance from your own procedures.

LB**Weigh the uplift**

Pounds per gallon, net gallons at 60°F, and total weight in pounds or kilograms.

LOG**Keep the record**

Tanks and trucks, photos, and notes. The reading itself can't be changed after it's saved.

PDF**Hand it over**

Export today, the week, or everything as a spreadsheet or PDF.

WCH**On your wrist**

A full calculator on Apple Watch, plus Siri and a Control Center button.
